SCOPE OF THE WORKSHOP

Remote Health Monitoring is a novel concept in the field of life extending health care, where telemetry is being used. Telemedicine has been among the most controversial technology of modern times (State of art).

Its applications seem endless, the capabilities are miraculous and yet it is so poorly understood. The idea of this workshop is to de-mystify Telemedicine and explain it in language that is accessible to engineering Technologist as well as Technologists. It will provide a channel for continuous access to the most sophisticated medical support systems, at all times. Further, Telemedicine shall improve patient care, enhance medical training, standardize Clinical practice, stabilize costs and unite clinicians worldwide. In short bridging Medical specialist and Engineers
